no. 3, p. 22-28.

DESCRIPTORS: *Meat, *Chromatographic analysis,
Amino acids, Amino acids, Decomposition.

A quantitative analysis of the decomposition of meat proteins is made to determine the freshness of meat after prolonged storage. The individual amino acids are studied via partition paper chromatography. The procedure is described in detail. Other analytical methods used include bacterioscopy; pH determination; reaction with CuSO_4 peroxidase, and formol; and visual fluorescence. The free amino acids as seen in the chromatogram are listed. The presence of threonine and methionine are noted.
